# Project Management 

Lecture 6-Resourcing and Budgets

Dr Andre Samuel

## This Session

 Budgets and Estimation- Estimation Principles
- Estimation Techniques
- Cost Estimating

## Estimation Principles

-Prediction of project costs, resources and durations
-The process of estimating maybe carried out several times during a project.

- Each providing greater accuracy and confidence than the one before

Accuracy by lifecycle stage
COST RANGE

## PROJECT LIFECYCLE STAGE

## Estimation Accuracy

## REQUIREMENTS <br> ESTIMATE

-Proportional to:

- Clearly defined and stable scope (WBS)
- Known specification
- Expert judgment available
- Normal conditions

## Useful guidelines for Estimating

- Agree of scope and quality for product
-Agree tolerances
-Review estimates frequently
- Maintain accurate historical data

## Estimation Pitfalls

- Misinterpretation of Scope of work
- Omissions or improperly defined scope
- Poorly defined or optimistic schedule
- Inaccurate work breakdown structure
- Failure to account for risks
- Failure to understand or account for cost escalation and inflation
- Failure to use correct estimation technique

## Basic Estimation Process

## System description

 (content, quality)
## Past experience + historical data

Influencing factors
(size, complexity, productivity etc)

## Effort

```
Project shape
(life cycle, strategy, constraints, etc)
```

Cost, Timescale

## Estimation Problems

- Optimism
- Politics
- Poor Bid Management
- No Process
- No Magic Solution

## Estimation Techniques

## Estimation Techniques

-Ballpark - made only when vague information exists and when all details of the work have yet to be decided.

- Analogy- uses actual cost of a previous, similar project as a basis for current project.
-Parametric- this involves using project characteristics such as weight, volume, lines of software code, hours of contact and so on to predict project costs

## Three Point Estimation

- Most likely (cM)- The cost of the activity, based on realistic effort assessment for the required work and any predicted expenses.
- Optimistic (cO)- The activity cost based on analysis of the best-case scenario for the activity.
- Pessimistic (cP)- The activity cost based on analysis of the worst-case scenario for the activity
- Triangular Distribution.

$$
c E=(c O+c M+c P) / 3
$$

-PERT Estimate

$$
c E=(c O+4 c M+c P) / 6
$$

Example- Estimating Durations:

| Activity | Optimistic | Most Likely | Pessimistic | PERT Estimate |
| :---: | :---: | :---: | :---: | :---: |
| A | 4 | 5 | 8 | 5.3 |
| B | 5 | 6 | 7 | 6 |
| C | 6 | 7 | 8 | 7 |
| Total | 15 | 18 | 23 | 18.3 |

## Approaches to Estimation

-Top-Down

- Bottom-Up

## Top-Down Estimating

- Senior management sets budget
- These are often fixed before detailed planning has taken place
- The trigger is usually the strategic long term plan in response to their perception of organization's goals and objectives
- Major drawback is that the budget is rooted in senior management's limited knowledge of specifics of the project
- Detailed information is not available when preparing long term plan

## Bottom-Up Estimation

- Estimating cost of individual work items then rolling up the individual estimates to get a project total
- It begins at the lowest level of detail and is gradually extended up through the WBS
- Can only take place when a good project specification exists and a task list is compiled
- Basically it utilize the WBS to develop a Cost Breakdown Structure (CBS)

## Bottom Up

## The Bottom Up approach:

- Project managers and planning/cost engineers prepare the budget based on a detailed analysis of all the resources required for the project tasks
- Once prepared, the project budget is passed up the chain of command for review and approval
- By definition bottom-up budgets tend to be more accurate and can have a positive impact on project morale because staff have played an active

(Maylor, 2017, pp. 177) role in the budgeting process (rather than having a budget imposed on them from above)

## Example of Bottom Up

## Resourcing

## Project Resourcing

- Once a project plan has been drafted (but not finalised), resources can be estimated and attached to the plan
- This is a valuable exercise - evaluating at an early stage the potential impact of any resource constraints on a proposed schedule...
- ... and facilitate resource-based budgeting to develop a detailed "bottom up" budget for the entire project

## What is meant by the term: 'Resource'?

- A project may have an excellent plan but this is of little use unless the plan can be carried out in practice
- This leads us to consider the important question: Just what things do we need to carry out the project? (i.e. the resources required)
- Quickly followed by quantifying:
- How many of each thing do we need?
- How much will they cost?
- What is the overall total cost?
(the project budget)

## Resource categorisation

There are generally four resource categories on every project:

1. Human Resources
2. Materials
3. Equipment

Can you think of an example of each type?

## Resource Breakdown Structure

Resource breakdown structure - A hierarchical representation of resources by category and type (PMI, 2021, p. 187 and 247)

## Resources - key questions to ask?

- Is the cost of each resource time-based or fixed?
- How easy is to determine the cost accurately?
- Has every project resource requirement been identified and quantified? Nothing missed?
- Are the projected costs firm quotations or just estimated costs that may change?
- Is there a need for contingency?
- Have we made allowance for risks?

## Resource Optimization

-Two main types of schedules

- Resource limited
- Time limited
- Resource Constrained - Levelling, allowing end date to move
- Time Constrained - Smoothing, moving tasks
- Splitting activities
- Assigning replacement resources

## Optimizing through Resource Levelling and Smoothing

- When you assign resources (staff) to a project it can often lead to over allocation or staff conflict
- For example resource A is assigned to an activity on Project XYZ on a day, for 8 hours. This resource is also allocated to Project LMN for 8 hours in a day
- Or resource A is assigned to work on multiple activities on a project occurring at the same time
- How do we resolve this?

## Resource Levelling

- Resource Levelling can be applied to projects when there are Resource Constraints.
- Resource Levelling forces the amount of work scheduled NOT to exceed the limits of the resources available.
- This results in either the activity durations being extended or entire activities being delayed to periods when the resource is available.
- NB. This often results in longer project durations.

## Resource Levelling

- A technique in which start and finish dates are adjusted based on resource constraints with the goal of balancing demand for resources with the available supply
- This involves removing the over allocation of resources. This can be done by:
- Delay certain task
- Assign a different resource
- Change task dependencies

## Resource Smoothing

- Smoothing is the process applied to a project to ensure that resources are used as efficiently as possible.
- It involves utilising float/slack within the project or increasing or decreasing the resource required for specific activities
- So that peaks and troughs of the resource usage are 'smoothed out'.
- NB. Smoothing does not affect the end date of the project duration

## Resource Smoothing

- Resource smoothing means the uniform distribution of resource allocation over the project
- Let's say that you have a resource working 30 hours this week, 10 hours next week, and 20 hours the week after next week.
- When you apply resource smoothing, the resource will work 20 hours this week, 20 hours next week, and 20 hours the week after. You see, the total amount of hours remains 60 hours, but is more uniformly distributed over the weeks.

## Resource levelling or "smoothing" ??

- Consider the following simple construction project example:

- 5 Site Engineer maximum allowed
- Note that Task 2 (16w) is twice as long as Tasks 3 and 4 ( 8 weeks).
- Task 1 is 2 weeks and Task 5 is 4 weeks

## Critical Path

## What is the critical path?

|  | Task Name | February | March | April |  |  |  |  | June |  | July |  | August | Ser |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 1 | Site Preparation |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 2 | Reservoir Construction |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 3 | Pumping Services |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 4 | Site Facilities |  |  |  |  |  |  |  |  |  |  |  |  |  |
| 5 | Integration Work |  |  |  |  |  |  |  |  |  |  |  |  |  |

## The resource histogram

 (based on the previous schedule)What is this profile indicating? Any evidence of potential staffing problems?

## Resource Smoothing with permissible float

- Site Facilities now rescheduled to follow Pumping Services no effect on overall project duration but a resourcing benefit

## A smoother histogram

Resource profile for Site Engineers now much smoother - and easier to recruit/mobilise/manage

## Activity- Resource Smoothing and Levelling

## The Problems

1. Only one admin resource is available for the project and they are currently scheduled to do both Activity 3 and Activity 5 on Day 2 of the project.
2. Only two carpenters work for the organisation so clearly there is an over demand on Activity 6.

- What actions can the Project Manager carry out to take these problems into consideration?

| Activity | Description | Predecessor | Resource | Number | 1 | 2 | 3 | 4 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Design Warehouse | n/a | Des Designer | 1 | 1 |  |  |  |  |  |
| 2 | Prepare Site | 1 | Bob Builder | 1 |  | 1 | 1 |  |  |  |
| 3 | Order Concrete | 1 | Amanda Admin | 1 |  | 1 | ===== |  |  |  |
| 4 | Lay Concrete | 2,3 | Bob Builder | 2 |  |  |  | 2 |  |  |
| 5 | Order Building Materials | 1 | Amanda Admin | 1 |  | 1 | ===== | ===== |  |  |
| 6 | Build Warehouse | 4,5 | Chip Carpenter | 3 |  |  |  |  | 3 | 3 |
|  |  |  | Aggregated Total |  | 1 | 3 | 1 | 2 | 3 | 3 |
| Cumulative Total |  |  |  |  | 1 | 4 | 5 | 7 | 10 | 13 |

## Smoothing

- Smoothing out resources (duration not affected)
- Some free slack/float - activity 5 moved to day 3

| Resource |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3 |  | Adimin |  |  | Carpenter 3 | Carpenter 3 |
| 2 |  | Admin | Admin | Builder 2 | Carpenter 2 | Carpenter 2 |
| 1 | Designer | Builder 1 | Builder 1 | Builder 1 | Carpenter 1 | Carpenter 1 |
|  | 1 | 2 | 3 | 4 | 5 | 6 days |

## Levelling

## -Levelling resources (duration may be affected)

## -Resource limited - 2 Carpenters - extends the project time

| Act. | Description | Resource | Number | 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Design Warehouse | Des Designer | 1 | 1 |  |  |  |  |  |  |
| 2 | Prepare Site | Bob Builder | 1 |  | 1 | 1 |  |  |  |  |
| 3 | Order Concrete | Amanda Admin | 1 |  | 1 | $===\frac{1}{1}$ |  |  |  |  |
| 4 | Lay Concrete | Bob Builder | 2 |  |  |  | 2 |  |  |  |
| 5 | Order Building Materials | Amanda Admin | 1 |  |  | 1 |  |  |  |  |
| 6 | Build Warehouse | Chip Carpenter | 3 |  |  |  |  | 2 | 2 | 2 |
|  |  |  | Aggregate | 1 | 2 | 2 | 2 | 2 | 2 | 2 |

## Summary-Levelling and Smoothing Scenario

## Costing

## Cost Breakdown Structure (CBS)

## Simple single task example

* What is the total budget cost in Euros for this task?

## Answer: Simple single task example

* What is the total budget cost in Euros for this task?
$\left(2^{*} 1800 * 10\right)+1200+(300 * 10)+500=€ 40,700$

## Some costs are related to the overall project (not a single task)

What is the total budget cost for these resources?

## Cost categories

- Time/Labour - Direct input of labour into tasks
- Materials - consumables and other items using in the process
- Capital Equipment - the purchase of the means of providing the conversion process, or part of its cost, maintenance, running and depreciation offset against activities
- Overheads - provision of an office, financial and legal support, managers and non-direct staff
- Contingency - margin/allowance
(Maylor, 2017, pp. 178)

## Turner (2009) Cost Elements

- Labour
- Materials
- Plant and Equipment
- Subcontract
- Management
- Overheads and Administration
- Fees and Taxation
- Inflation
- Contingency
- Financing

## Cost Control Cube

## Contingency

- Contingency reserves are within the cost baseline that is allocated for identified risks, which are accepted and for which contingent or mitigating responses are developed.
- Contingency reserves are often viewed as the part of the budget intended to address the "knownunknowns" that can affect a project.
- Contingency reserves can provide for a specific activity, for the whole project, or both.
- The contingency reserve may be a percentage of the estimated cost, a fixed number, or may be developed by using quantitative analysis methods.
- Contingency reserves are part of the cost baseline and the overall funding requirements for the project.

## Management Reserves

- Management reserves are an amount of the project budget withheld for management control purposes
-It is reserved for unforeseen work that is within scope of the project.
- Management reserves are intended to address the "unknown unknowns" that can affect a project.
-The management reserve is not included in the cost baseline but is part of the overall project budget and funding requirements.
-When an amount of management reserves is used to fund unforeseen work, the amount of management reserve used is added to the cost baseline, thus requiring an approved change to the cost baseline.
- Cost Estimate
- The cost estimate is the cost of all work packages and is "rolled up" to the top level; this is the total cost of the project.
- Cost Baseline
- When you add the contingency reserve to the cost estimate, you get the cost baseline.
- Cost Baseline $=$ Cost Estimate + Contingency Reserve
- Note that the project's performance will be measured against the cost baseline.
- Project Budget
- If you add the management reserve to the cost baseline, you will get the project budget.
- Project Budget = Cost Baseline + Management Reserve

Elements of Costs
Maylor (2005, pg. 162)
$+$

|  | The wages and salaries of people ernployed <br> on the project, for time that can be wholly and <br> specifically attributed to the project. These <br> times should be costed at the standard cost <br> rates applicable to each grade of sta ff. |
| :---: | :---: |
|  | Direct labour |
| Equipment, materials and bought-out services |  |
| used specifically on the project. |  |

## Budget Formats- Horizontal

## Budget FormatsVertical

| Task | Resource | Duration (days) | Rate/day | Direct Labour Cost |
| :---: | :---: | :---: | :---: | :---: |
| Analysis of Cost Planning | C1 | 20 | 1,600.00 | 32,000.00 |
|  | C2 | 20 | 1,600.00 | 32,000.00 |
| Detailed Analysis of the Effectiveness of Project Planning | C1 | 5 | 1,600.00 | 8,000.00 |
|  | C2 | 0 |  |  |
| Improvement of Project Planning Processes | C1 | 10 | 1,600.00 | 16,000.00 |
|  | C2 | 15 | 1,600.00 | 24,000.00 |
| Detailed Description of Project Planning Metrics | C1 | 20 | 1,600.00 | 32,000.00 |
| Selection of Project Planning Software | C1 | 30 | 1,600.00 | 48,000.00 |
|  | C2 | 20 | 1,600.00 | 32,000.00 |
| Meeting with Supplier | C1 | 0 | 1,600.00 | - |
|  | C2 | 10 | 1,600.00 | 16,000.00 |
| Discussion of Report with MD | C1 | 1 | 1,600.00 | 1,600.00 |
| Writing of Final PMO Report | C2 | 10 | 1,600.00 | 16,000.00 |
| Presentation of Final PMO Report | C1 | 1 | 1,600.00 | 1,600.00 |
|  |  |  |  | 259,200.00 |
|  |  |  |  |  |
| OTHER LABOUR COST |  |  |  |  |
| S1 |  |  | 13,000.00 |  |
| S2 |  |  | 13,000.00 |  |
| SPO |  |  | 21,000.00 |  |
|  |  |  |  | 47,000.00 |
| TOTAL LABOUR COST |  |  |  | 306,200.00 |
|  |  |  |  |  |
| OVERHEADS |  |  |  |  |
| Accomodation |  |  | 11,700.00 |  |
| Travel |  |  | 16,000.00 |  |
| Meetings |  |  | 25,000.00 |  |
|  |  |  |  | 52,700.00 |
| FIXED COST |  |  |  |  |
| PC hardware |  |  | 15,000.00 |  |
| Software |  |  | 25,000.00 |  |
| Miscellaneous |  |  | 8,000.00 |  |
|  |  |  |  | 48,000.00 |
|  |  |  |  |  |
| Training Cost |  |  |  | 50,000.00 |
| Cost Estimate |  |  |  | 763,100.00 |
| Contingency 10\% |  |  |  | 76,310.00 |
| Baseline Cost |  |  |  | 839,410.00 |
| Management Reserve |  |  |  | 10,590.00 |
| Project Budget |  |  |  | 850,000.00 |
